-!- FUNCTION: HEMAGGLUTININ IS RESPONSIBLE FOR ATTACHING THE VIRUS TO CELL RECEPTORS AND FOR INITIATING INFECTION.

-!- SUBGNIT: HOWOTRIMER. EACH OF THE MONOMERS IS FORMED BY TWO CHAINS (HAI AND HA2) LINKED BY A DISULFIDE BOND.

-!- SIMILARITY: BELONGS TO THE INFLUENZA HEMAGGLUTININ FAMILY.

4. VICOLOGY 159:109-119(1987).

- I FUNCTION: HEMAGGLUTININ IS RESPONSIBLE FOR ATTACHING THE VIRUS TO CELL RECEPTORS AND FOR INITIATING INPECTION.

- I SUBUNIT: HOWOTHERNER. EACH OF THE MONOMERS IS FORMED BY TWO CHAINS (HAI AND HA2) LINKED BY A DISJULEIDE BOND.

- SIMILARITY: BELONGS TO THE INFLUENZA HEMAGGLUTININ FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

                                                                                                                                                                           ó
                                                           This peptide fragment represents a human influenza virus haemagglutinin eptitope which is used to make monoclonal antibodies with an affinity constant of 108 M-1. Such antibodies are used for detecting and isolating native human influenza virus haemagglutinin (HA), modified HA or HA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents a chimeric fusion protein of the invention. The specification describes a chimeric pIX protein having at least one adenoviral pIX domain and a non-native amino acid sequence. The non-native sequence is a ligand that binds to a substrate present on surface cells. The chimeric proteins are used for producing adenovirus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      for

Expression of the genetic element results, directly or indirectly in the modification of an optical property of the encoded polypeptide. The method comprises compartmentalizing the genetic elements into microcapsules, expressing them to produce their respective gene products within the microcapsules, and sorting genetic elements which produce the gene product(s) with the desired activity. The method is used for isolating genetic elements which encode a gene product with a desired activity. This can be a catalytic, regulatory or binding activity. The present sequence represents a fusion of a flag epitope and influenza haemagglutinin. It was used in the course of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

The present sequence is the Saccharomyces cerevisiae alpha mating factor receptor Ste2, which was used in the development of a method to prepare cells presenting on their surface a mutant G-protein coupled receptor (GPCR) binding a desired ligand which the natural receptor cannot. The method comprises generating replicable expression plasmids comprising a coding sequence for a GPCR mutated by one or more amino acids in its transmembrane and/or extracellular domains, and operatively linked expression control sequences, transforming host cells with the plasmids and contacting the cells with the plasmids and contacting the cells with the higand and isolating those which bind. GPCR are natural receptor proteins, i.e. membrane proteins that allow cells presenting mutant GPCR on their surfaces are useful as biosensors,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    with potential applications in diagnostics and environmental and on-line process monitoring.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Chimeric protein; fusion protein; FLICE like inhibitor protein; FLIP; Fas; TNF; apoptosis; caspasse-8; ligand; T cell; thymocyte; tumour specific antigen; immune response; therapy, prophylaxis; diagnosis; HIV; human immunodeficiency syndrome; AIDS;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cells for surface expression of mutants of natural G-protein receptor - where the mutants can bind a ligand that the natural
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    83.8%; Score 67; DB 18; Length 481; 92.3%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          엄
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Tether1 and control plasmids.

Tether1 and control plasmids.

Compounds of the structure or formula S-(L)_n-B, R_1-S-(L)_n-R or compounds of the structure or formula S-(L)_n-B, R_1-S-(L)_n-R or compounds of the structure or formula signaling functional domain of parathyroid hormone (PTH); L is a linker molecule present n times (where n is a positive integer 1-10 (preferably 4); B is a C-terminal inding portion of PTH(1-34) or a PTH-related protein (PTH-rP) (1-34);

R_1 is the PTH-1 receptor signal sequence; and R is (a portion of) PTH-1 receptor signal sequence; and R is (a portion of) PTH-1 receptor signal sequence; and R is (a portion of) PTH-1 receptor sequence. The new compounds are used for treating mammalian conditions characterized by decreases in bone mass, determining rates of bone reformation, bone resorption and/or bone remodeling, treating diseases and disorders associated with decreased tether1 activity, increasing cAMP in a mammalian cell having PTH-1 receptors, or screening for a peptide or non-peptide PTH (claimed). The new compound can be administered by inhalation unlike the large native PTH or PTH P which avoids the need for regular injections to treat osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     linked to a carboxy-terminal binding portion of parathyroid hormone for treating mammallan conditions characterized by decreases in bone mass
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           compound comprising an amino terminal signaling functional domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Alpha mating factor receptor; Ste2; mutant; blosensor; diagnosis; G-protein coupled receptor; GPCR; environmental monitoring;
                                                                  PTH: parathyroid hormone; conjugate; bone mass; bone reformation; PTH-1 receptor; resorption; remodeling; tether1; osteoporosis.
                  Peptide E16853A1 for construction of rTether1 containing HA-tag.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                 anti-apoptotic polypeptide which inhibits apoptosis of lymphocytes in combination with a transport group is described. The transport group is capable of transport group is described. The transport group is capable of transporting the chimeric group or fusion peptide across the cell membrane. The anti-apoptotic polypeptide is FLICE-like inhibitor protein (FLIP) which inhibits Fas and TWF mediated apoptosis by inhibiting binding of Caspase 8 to the Fas receptor complex, thus shutting off the downstream Fas signalling pathway. The chimeric group and fusion peptide are useful for inhibiting ligand-induced apoptosis by bringing them into contact with T cells. The chimeric group is useful for expanding T cells in vitro e.g. T cells specific for particular antigens such as tumour-specific antigen, for enhancing particular antigens such as tumour-specific antigen, for enhancing particular antigens such as tumour-specific antigen, for enhancing are useful for their apoptosis of chronically activated CD4 transpertic, prophylactic or chimeric group is also useful for therapeutic, prophylactic or diagnosis of intracellular delivery of small molecules and conding such polypeptides. Two primers (AAA54298) were used to amplify the FILP CDNA for subcloning into the Xhol-Nool site of the pHA-TAT vector which contains the N-terminal protein contains the N-terminal protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Protein transduction domain; fusion molecule; therapeutic agent; drug targetting; drug discovery; cell transduction; bioavailability; vaccine; nervous system disorder; Alzheimer's disease; Parkinson's disease; Huntington's disease; pre-senile dementia; epilepsy; seizure; compulsive behaviour; meningitis; encephalitis; ischaemia; spongiform encephalopathy; dyslexia; age-related memory loss;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            a cardiovascular drug, an antitumour drug, an analgesic, an antinflammatory, a diagnostic marker or a drug for the treatment or prevention of a central or peripheral nervous system disorder. The central nervous system (CNS) disorder is especially Alzheimer's disease, Parkinson's disease, Huntington's disease, and also includes pre-senile dementia, epilepsy and seizures, compulsive behaviour, meningitis (including viral and bacterial meningitis), encephalitis, ischaemia, scrapie (or related spongiform encephalopathies), dyslexia, age-related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          resistant microorganisms using a suitable fusion molecule; a mammal comprising a covalently linked fusion molecule; and a mammal adapted for experimental use in which at least one transduction molecule has been transduced into essentially all the cells of the mammal. The fusion molecule is used to deliver a therapeutic agent to a mammal, especially a human. The linked molecule may be a vaccine, an anti-infective drug,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           memory loss or Lou Gehring's disease. Fusion molecules can also be used to Xill Virally infected cells, especially those infected with HIV. The vaccines are used to treat or prevent bacterial or viral infections. The methods are a highly effective means for transducing a molecule
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              size,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a novel fusion molecule comprising at least one protein transduction domain (PTD) and at least one linked molecule, where the linked molecule has therapeutic or prophylactic activity against a medical condition. The invention also relates to methods of drug discovery in which the test compound is linked to a suitable transducing protein and introduced to a cell; a method of killing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             are associated with many therapeutic agents (e.g., large molecular si
hydrophobicity, hydrophilicity, biological resistance), by providing
efficient transduction of the transfer cell. The present sequence
represents a protein transduction domain used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      into an entire mammal or into specific cells, tissues, organs and systems within it. They also overcome bioavailability problems that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Fusion molecules comprising protein transduction domains and therapeutic agents, useful for treating e.g. Alzheimer's and Parkinson's diseases, dementia and epilepsy -

```

```
This peptide comprises a Flu epitope tagged scrambled peptide.

Murine 1071/2 Clone 8 cells were infected with pBabe puro

Extravirus constructs containing a sequence coding for the Flu
scrambled epitope or an inhibitor peptide (see AAW2917) identical

cothe C2 region of protein Kinase C (PKA) isozymes. Control clone

cothe C2 region of protein Kinase C (PKA) isozymes. Control clone

cothe C2 region specimently cytoplasmic and perinuclear staining,

while PMA induced cells showed translocation to the nucleus. Cells

infected with constructs coding for the scrambled peptide showed

similar staining. Those infected with constructs coding for

the C2 region showed predominantly cytoplasmic and perinuclear staining in both control and PMA induced cells. Novel outcomes con

cocur upon expression of peptides in cells. A claimed method of

screening for transdominant intracellular bioactive agents (A) able

cother the phenotype of a cell comprises: (a) introducing a

library of different randomised nucleic acids (I) into cells; and

(B) screening the cells for altered phenotype due to presence of

(A). Also new are: (1) a library of retroviruses containing

containing the library of (1), preferably integrated into the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Intracellular transdominant bioactive agent; screening; cell phenotype; effector peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                   Screening for transdominant intracellular active agents able to alter cell phenotype - useful for examining for changed phenotype, particularly to identify potential drugs with e. g. antitumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Transdominant effector peptide associated screening peptide #49

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents a scrambled flu-epitope peptide, and can be used in the method of the invention. The method is for screening for transdominant bloactive agents (A) able to alter the phenotype of a comprises: (a) introducing a library of different randomised nucleic acids (I) into cells; and (b) screening the cells for altered phenotype due to presence of (A). (A) are potential pharmaceuticals, from their effect on signalling pathways. A particular application is to identify peptides, encoded by (I), that have antitumour activity or are able to increase sensitivity to, or reduce toxicity of, known antitumour agents. More generally the method can identify agents for treatment of many other conditions, e.g. cardiovascular diseases, anglogenesis, atherosclerosis, obsestly, neurodegeneration, bone disease, viral and other infections,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0
                                                                                                                                                                                                                                              This invention describes novel in vitro screening methods (1) for a transdominant intracellular bloactive agent capable of altering the phenotype of a cell. (1) comprises: (a) introducing a molecular library of randomized candidate nucleic acids into several cells; and (b) screening the cells for a cell exhibiting an altered phenotype, where the altered phenotype is due to the presence of a transdominant bioactive agent. The methods are particularly useful for screening intracellular transdominant effector peptides and RNA molecules selected inside living cells from randomized pools. (1) is also useful for introducing random libraries into cells to screen for bloactive compounds. The methods allow lighous and their corresponding expression products in a single step. In addition, the methods allow screening in the absence of significant prior characterization of the cellular defect.
                                                                                                                                                                                   Methods for screening intracellular transdominant effector peptides and RNA molecules comprise delivering random oligonucleotides to cells, which are then screened for an altered phenotype.
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Short-shafted adenoviral fibre; ssAF; penton base; cystic fibrosis;

The present peptide sequence is incorporated into an adenoviral fiber.

The fiber protein and its penton base are used by the adenovirus to

The fiber protein and its penton base are used by the adenovirus to

infect a cell. The invention claims for a transfer vector which contains

DNA encoding a short-shafted adenoviral fibre (ssAF). The adenoviral

CC benton base can be modified by incorporating sequences for a ligand to a

CC all surface receptor or sequences that allow binding to a bispecific

antibody. Bispecific antibodies raised against the present peptide

CC antibody one end of the antibody molecule to bind to the fiber and the

CC ther end to bind specifically to a cell surface receptor. Therefore

CC this method enables targeting of the adenovirus to a desired cell-surface

CC this method has end to a non-native amino acid sequence either

CINTO the penton base or the fibre knob. The non-native amino acid

Sequence can be such that it enables direct or indirect binding agent

CC means of a bispecific or multispecific binding agent, of the adenovirus

CC calconius to attach to a cell and therefore effect entry into the cell

Would reduce the level or efficiency of adenoviral penton base binding to

CC the adenovirus to a qiven cell. The transfer vector is claimed

CC the adenovirus to a given cell. The transfer vector is claimed

CC the adenovirus to a given cell. The transfer vector is claimed

CC the buseful for expressing therapeutic genes, for treating inherited

CC beautogenic infections (e.g. HIV infections) and cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Integrin; cell surface receptor; penton base protein; adenovirus; binding site; binding domain; cell surface binding site; gene therapy; bispecific molecule; adenoviral transfer vector; pAT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Haemagglutinin sequence of a chimeric adenovirus penton base protein.
                                                                                                                                                                                        Short-shafted adenoviral fibre constructs - used for producing products that facilitate entry into target cells, useful for gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   .;

This invention describes a novel method for the selection of monoclonal antibodies (MAb) which comprises (i) fusing B lymphocytes with myeloma entibodie antibody-producing hybridomas such that the antibodies are presented at the surface of the hybridomas by an antibody-binding protein (I); and (ii) binding the antibody to antigens (Ag). The invention also describes antibody-binding proteins (I) that comprise a combination of the signal peptide of a murthe lammnoglobulin (Ig) kappa chain or a murine MHC (major histocompatibility complex) Class I k(k) molecule; an antibody-binding site of proteins A, G, L or LG, and the transmembrane domain of PDGFR (platelet-derived growth factor receptor) or CD52. The method is used to select MAb with specificity for particular antigens. MAb can be selected without separate culture of hybridomas, and selection can be made against many antigens in a library, optionally
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Expression vector; antibody binding protein; monoclonal antibody; Neo-R; B lymphocyte; myeloma cell; hybridoma; protein G; bla protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Selecting monoclonal antibodies, by expressing them on the surface of hybridomas attached to antibody-binding protein, then reaction with
treating disorders characterised by inappropriate cell proliferation or cell death
                                                                                                              A haemagglutinin (HA) tag peptide (AAR81452) was expressed as a fusion with amino acids 2-221 of apoptosis-associated protein Bcl-Y (see AAR81451) following PCR amplification (see AAT17378-79) of Bcl-Y CDNA and insertion into a CWV-based pcDNA1/amp vector derivative. The HA-Bcl-Y protein was produced in vitro and in transfected COS7 and NIH3T3 cells.
                                                                                                                                                                                                                                                                                                                                                                              ;

                                                                                                                                                                                                                                                                                                        The present sequence represents a haemagglutinin sequence of a chimeric adenovirus penton base protein. The peptide is encoded by overlapping oligonucleotides. The penton base protein binds to cell surface receptors called integrins. The integrins not only provide a binding site for the adenoviral penton base protein, but also mediate cellular adhesion to the extracellular matrix molecules. The specification describes a method of introducing an adenovirus into a cell in vitro having a particular molecule comprising a component that selectively binds a binding domain of the penton base protein of the adenovirus and a second component that selectively binds the cell surface binding site. A complex of the adenovirus and a second component that selectively binds the cell surface binding site. A complex of the adenovirus and the cell is montacted with it to allow entry of the adenovirus into the cell. The methods can be used for research and the vectors can be used for gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     used to treat or prevent a wide variety of cancers (e.g. of colon, breast or prostate, melanoma, glloma), alone or as adjunct to other therapies; autoimmune diseases (e.g. rheumatoid arthritis, psoriasis, multiple sclerosis, systemic lupus erythematosus, type I diabetes, allergy) or viral, bacterial or parasitic infections (e.g. human immune deficiency virus, Helicobacter pylori, porphyromonas gingivalis, or Candida abbicans). A panel of cells (or cell lines) each genetically modified to express different antigens can be maintained as a repository,
on the basis of strength of affinity for a particular antigen. Complex mixtures of hybridomas can be used for selection, reducing the time and cost involved in MAD selection. This sequence represents the protein G contained in the expression vector pSEX11G2 which contains the protein G, Neo-R and the bla protein described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  invention relates to a vaccine comprising a cell having a membrane-bound fusion protein (FP) consisting of a non-antibody immunomodulator (I) linked to a heterologous membrane attachment domain. The vaccines are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GM-CSF; granulocyte macrophage colony stimulating factor; vaccine; membrane-bound fusion protein; non-antibody immunomodulator; infection; membrane attachment domain; cancer; autoimmune disease; therapy.
                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Vaccine having a membrane-bound fusion protein - comprising an Immunomodulator and heterologous membrane attachment domain useful for modulation of immune response against a disease-associated

Sequence 5, Application US/08321071A

Patent No. 5672686

CENERAL INFORMATION:
APPLICANT: CHITTENDEN, Thomas D.
TITLE OF INVENTION: APOPTOSIS RELATED PROTEIN BC1-Y, AND METHODS
TITLE OF INVENTION: OF USE THEREOF
NUMBER OF SEQUENCES: 31
CORRESPONDENCE ADDRESS:
ADDRESSE: Hale and Dorr
STREET: 1455 Pennsylvania Avenue, N.W.
CITY: Washington
STATE: D.C.
ZIP: 20004

ZIP: 20004

MEDIUM TYPE: Floppy disk
                                                                                                   Sequence 10, Application US/08700846
Patent No. 5962311
GENERAL INFORMATION:
PETRUS W.
APPLICANT: WICKHAW, THOMAS J.
APPLICANT: ROELVINK, PETRUS W.
APPLICANT: KOVESDI, IMRE
TITLE OF INVENTION: A SHORT-SHAFTED ADENOVIRAL FIBER AND ITS
TITLE OF INVENTION: USE
NUMBER OF SEQUENCES: 17
CORRESPONDENCE ADDRESSE: LEYDIG, VOIT & MAYER, LTD.
STREET: TWO PRUDENTIAL PLAZA, SUITE 4900
                                                                                                                                                                                                                                                                                                                                                                                                                     COMPUTER READABLE FORM:

Patent No. 5851521

GENERAL INFORMATION:
APPLICANT: BRANELLEC, Didier
APPLICANT: ISNER, Jeffrey M.
APPLICANT: ISNER, Jeffrey M.
APPLICANT: BENEFLE, Patrice
TITLE OF INVENTION: VIRAL VECTORS AND THEIR USE FOR TREATING
TITLE OF INVENTION: HYPERPROLIFERATIVE DISORDERS, IN PARTICULAR RESTENOSIS
NUMBER OF SEQUENCES: 3
CORRESPONDENCE ADDRESS:
                  Score 60.5; DB 1; Length 272;
Pred. No. 0.035;
1; Mismatches 0; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Length 14;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 6, Application US/08282951
Patent No. 566590
GENERAL INFORMATION:
APPLICANT: YANG, ZHI
TITLE OF INVENTION: METHOD FOR ISOLATING AND DIRECTLY
TITLE OF INVENTION: CLONING GENES WHICH ENCODE CELL-SURFACE AND SECRETED
TITLE OF INVENTION: PROTEINS
NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Score 60.5; DB 1; Length 102;

Sequence 52, Application US/09169015
Patent No. 6180343
GENERAL INFORMATION:
APPLICANT: Anderson, David
APPLICANT: Anderson, David
TITLE OF INVENTION: Green Fluorescent Protein Fusions with Random Peptides
FILE REFERENCE: A6600/DabFrmS/SJR
CURRENT APPLICATION NUMBER: US/09/169,015
CURRENT FILING DATE: 1998-10-08
NUMBER OF SEQ ID NOS: 55
SOGTWARE: Patentin Ver. 2.0
SEQ ID NO 52
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 39, Application US/08672213

Patent No. 6306649

GENERAL INFORMATION:
APPLICANT: GILMAN, Michael Z.
APPLICANT: NATESAN, Sridaran
TITLE OF INVENTION: USE OF HETEROLOGOUS TRANSCRIPTION
TITLE OF INVENTION: FACTORS IN GENE THERAPY
NUMBER OF SEQUENCES: 72
FILING DATE: 10 TAN 1337

CLASSIFICATION: 435

PRIOR APPLICATION DATA:
APPLICATION UNMER: 08/390,874

FILING DATE: 17-FEB-1995

ATTORNEY AGENT INFORMATION:
NAME: Dow, Karen B.
RECISTRATION NUMBER: 29,684

REFERENCE/DOCKET NUMBER: 02307K-057010US

TELEPHONE: (415) 576-0200

TELEFAX: (415) 576-0300

INFORMATION FOR SEQ ID NO: 13:
SEQUENCE CHARACTERISTICS:
LENGTH: 16 aming acids
